Methodology

The compilation of the academic documents proposed in this manuscript has been realized using the gateway of WEB OF SCIENCE™ THOMSON REUTERS™¹ and its available tools to refine the researches. One of the tools used to perform the researches is the symbol “*” placed directly after the choosen word to take in consideration the term in its singular and plural form or to select a family of subjects which have a comon radical. As an exemple the research with catal* as topic covers the words catalysis, catalyst(s), catalytic, catalyzes, etc.

Reasearch has generally been done until 2013 to avoid changes during the confection of this manuscript.

To identify academic papers that report review studies where the use of ILs is involved, the terms review* and overview* have been applied and the instruction was that these terms had to be included in the paper title and “ionic liquid*” expression in the topic. Final results are expressed as the sum of obtaines results.

Inforamtion about brazilian patent applications has been obtained using the INPI (<http://www.inpi.gov.br/portal/>) gateway.
